

PRODUCTS THAT ARE GOOD FOR PEOPLE AND THE PLANET

# **Cradle to Cradle Certified<sup>®</sup> Scorecard**

## Cradle to Cradle Certification: Third-party verified sustainability performance

Cradle to Cradle Certified is a globally-recognized standard that certifies products as being good for both people and the planet. Many of our acoustic solutions are Cradle to Cradle certified at the bronze or silver levels, meaning that they support the wellbeing of building occupants and actively contribute to a more sustainable construction sector.

### How Rockfon products achieve certification

Cradle to Cradle Certified Category	Explanation of category	Rockfon level	How Rockfon achieves this level
	Chemicals and materials used in the product are selected to prioritize the protection of human health and the environment, generating a positive impact on the quality of materials available for future use and cycling.	Silver / Bronze (depending on the product)	More 95%/75% of each product has been assessed and does not contain any substances of special concern above relevant thresholds, according to v4 draft 1 of the Cradle to Cradle standard. We have also developed a strategy to phase out unassessed chemicals and optimize our composition.
	Products are intentionally designed for their next use and are actively cycled in their intended cycling pathways.	Silver	Our products are compatible with high-value cycling. Our products are actively cycled through the various recycling programs we offer across Europe. Our products are manually removed and have a design that allows for easy recycling or reuse at the end of life.
	Product manufacturing results in a positive impact on air quality, the renewable energy supply, and the balance of climate changing greenhouse gases.	Silver	We've established a long term renewable energy strategy in our manufacturing and we have worked towards actively reducing the Greenhouse gas emissions created during the production of our products.
	Water and soil are treated as precious and shared resources. Watersheds and soil ecosystems are protected, and clean water and healthy soils are available to people and all other organisms.	Silver	We've implemented several water conservation best practices. We've set specific water reduction targets and we're working towards establishing positive impact projects.
	Companies are committed to upholding human rights and applying fair and equitable business practices.	Gold	We have a responsible sourcing program and a Code of Conduct for all the suppliers we work with. We have also established social projects with a positive impact in the markets where we operate.

## Check out the certificates we have for our products
